

GoIDEA™

E.L. MODULE

The percentage of public school students in the United States who are English learners has rapidly increased over the last ten years. The GoIDEA English Learners software is a resource that can be used by school districts to best support their E.L. students.

KEY BENEFITS

- Our GoIDEA English Learners software provides an Individual Learning Plan template for staff to develop, share, and store their plan documentation.
- The software generates individual student summaries featuring statements aligned with their ACCESS test results.
- GoIDEA's E.L. module can interface with any student information system.
- It provides both students' E.L. history & plans for any student transfers between district schools while maintaining historical archived records.
- The system can auto-populate information across forms/areas.

INDIVIDUAL LEARNING PLAN (ILP)

The Individualized Learning Plan, also known as the ILP, documents various required components such as E.L. program type & services offered, key dates, student's academic history & parental consent. The template provides summary sections for academic performance and assessment in reading and math, as well as language assessments including detailed ACCESS scores from current and prior academic years. Teachers and staff rave about the module's ability to generate individualized language goals that align with industry standards. GoIDEA's ILP allows staff to select instructional supports & testing accommodations from a curated list.
